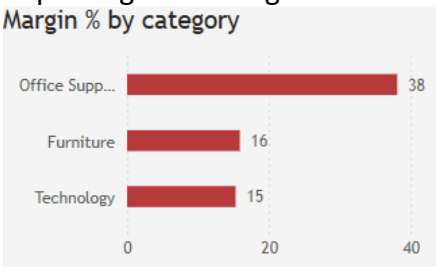
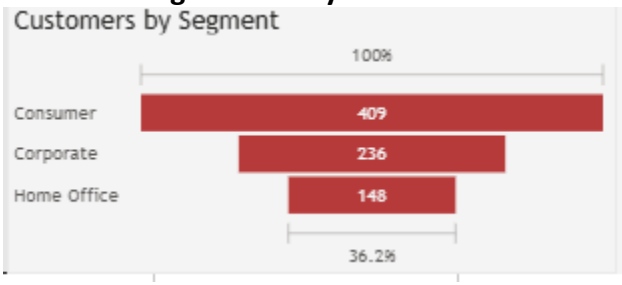
- Technology products made more revenue compared to Furniture and Office Supplies.
- Although chair & table furniture being top 6 most sold product other Furniture made less revenue, compared to other categories furniture products are less.
- While Office supplies made moderate performance with 33.29% of revenue.
- Top 5 Products:
    1. Phones
    2. Chairs
    3. Blinders
    4. Storage
    5. Copiers
- The top 5 products generated 42% of total sales, showing that revenue is concentrated in a small number of products.
- The company should continue promoting high-performing Technology products while improving margins in Furniture.



Customer Segment Analysis



- Consumer customers generated the highest number of orders, but corporate customers had the highest average order value.
- Corporate customers are more valuable per transaction and may respond well to targeted promotions.

Problems & Recommendations

Problem 1: The East region has high shipping delays.
Cause: Orders take longer to ship in that region.
Recommendation: Review logistics partners and prioritize faster shipping methods.

Problem 2: Office Supplies have a low average order value.
Cause: Customers buy low-priced items.
Recommendation: Bundle products or create discounts for larger purchases.

Problem: Sales depend heavily on the West region.
Cause: Other regions are underperforming.
Recommendation: Increase marketing in South and East regions.
